SUMMARY

Software engineer with production MERN deployments on AWS and a CI-based autograding system serving 150+ students. Strong in React, Node.js, MongoDB, REST APIs, and GitHub Actions automation. Seeking full-stack or backend engineering roles.

TECHNICAL SKILLS

Languages: JavaScript, Python, C++, SQL, Bash, PowerShell
Frontend: React.js, Tailwind CSS, Chart.js, Framer Motion, Vite, HTML/CSS
Backend: Node.js, Express.js, Socket.io, REST APIs, JWT Authentication
Databases & Data: MongoDB (Mongoose, Aggregation Pipelines), MySQL, Pandas, NumPy
DevOps & Tools: AWS EC2, Docker, Nginx, GitHub Actions, Vercel, Render, Git, Linux, Pytest, Postman, Cloudinary, MongoDB Atlas

EXPERIENCE

University of Management and Technology Lahore, Pakistan
Teaching Assistant – Web Technologies, Data Science, Artificial Intelligence March 2026 – Present

- Built and deployed an **automated grading system** for 3 courses (Web Tech, Data Science, AI) serving **150+ students**, replacing manual grading with instant feedback on every submission.
- Designed a **secure CI/CD testing pipeline** on GitHub Classroom and GitHub Actions that runs hidden tests against student code and posts results to the course dashboard automatically – org: github.com/sst-cs.
- Wrote **automation scripts** updating workflows across **hundreds of repositories** and engineered a **partial-credit scoring system** for fair, granular feedback.
- Designed **assignments and test suites from scratch** for all 3 courses; ran **lab sessions and office hours** to mentor students on Git, debugging, and software engineering best practices.

PROJECTS

FarmKonnnect (Final Year Project) | [Live Demo](#) | [GitHub](#) 2025 – 2026

- Led a 4-person team to build a **full-stack agricultural marketplace** (React, Node.js, MongoDB, Docker, AWS) with real-time chat and commodity price intelligence.
- Engineered **real-time messaging and notifications** using Socket.io with JWT auth, supporting price negotiation workflows between farmers and buyers.
- Built a **Python web scraper** ingesting daily commodity prices from **50+ cities** with cron scheduling and configurable email/WebSocket alerts.
- Deployed on **AWS EC2** via Docker Compose, Nginx, and Let's Encrypt SSL; implemented **Repository Pattern (DAL)** over MongoDB with aggregation pipelines.

NexStock – Inventory & Stock Management | [Live Demo](#) | [GitHub](#) 2025 – 2026

- Built a **full-stack inventory platform** (React 19, Express 5, MongoDB) with RBAC, server-side pagination, debounced search, and **4 Chart.js analytics dashboards**.
- Implemented **RBAC with 3 roles** (Admin, Store Manager, Employee), enforcing permissions across frontend route guards and backend middleware.
- Secured with **JWT httpOnly cookies**, Helmet, bcrypt, CORS policy, and rate limiting; configured cross-domain auth for split Vercel + Render deployment.
- Designed RESTful APIs with express-validator and centralized error handling; integrated Cloudinary; deployed on **Vercel + Render + MongoDB Atlas**.

EDUCATION

University of Management and Technology Lahore, Pakistan
Bachelor of Science in Computer Science *Expected Graduation: July 2026*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Systems, Web Technologies, Advanced Web Development, Artificial Intelligence, Machine Learning, Data Science & Analytics, Software Engineering, Blockchain Technologies, Computer Networks.
